

THE BULLETINI

JULY 2002

CONSTANT IMPROVEMENT IS A WAY OF LIFE AT CMC

In each and every CMC project, we strive to provide constant improvement through evolution and innovation... all of which is intended to provide exceptional quality and service for our clients. The end result is to create comforting spaces and honor the lives of the deceased through unique and distinctive architectural design and memorialization.

We hope that the selection of photographs in this issue of "The Bulletin" will whet your appetite to learn more about CMC and how we may be of service to your property or organization.

For our web-surfing clients, please visit our website, www.mausoleum-cmc.com, to see many other projects that are not included in "The Bulletin".

Richard Verrier

Vice-President, Central Region, Canada & U.S.A.

Albany Diocesan Cemeteries has selected Carrier Mausoleums Construction USA, Inc. to construct their new community mausoleum in St. Agnes Cemetery in Menands, New York.

ST. AGNES CEMETERY

The new mausoleum was designed by the architectural firms of Schoepfer Architects of Syracuse, New York, in conjunction with Cataldo, Waters, and Griffith of Schenectady, New York.

Constructed into a hillside, the building contains an interior garden level and a terrace

level with an interior open balcony. There are also several sections of exterior crypts.

The crypt inventory totals 969 casket spaces, comprised of a variety of different types, including single, tandem, as well as slide-over crypts. In addition, there is a wide selection of cremation niche spaces including both marble fronted niches as well as internally illuminated bronze and glass niches.

The interior crypt shutters will be finished with an attractive combination of polished marbles, including Bianco Carrara, Biancone Apricena, and highlighted with Verde Issorie for the trim and couch crypt shutters. The exterior crypt shutters will be finished with polished Plum Rose granite.

Religious significance will be provided for the project with the incorporation of the Stations of the Cross on fourteen bronze shutter fronts. There are also four large carved wood icon panels commemorating the North American Saints.

There is liberal use of premium finishes throughout the mausoleum, including western red cedar on the interior ceilings and brick veneer on the exterior walls. Topping off the building is a standing seam copper roof.

Construction commenced on April 15, 2002 and is due to be completed by November 30, 2002.

Our innovative dome unit was first introduced in 1998. Since then, we have installed over forty (40) units throughout Canada and the U.S.

GREENWOOD

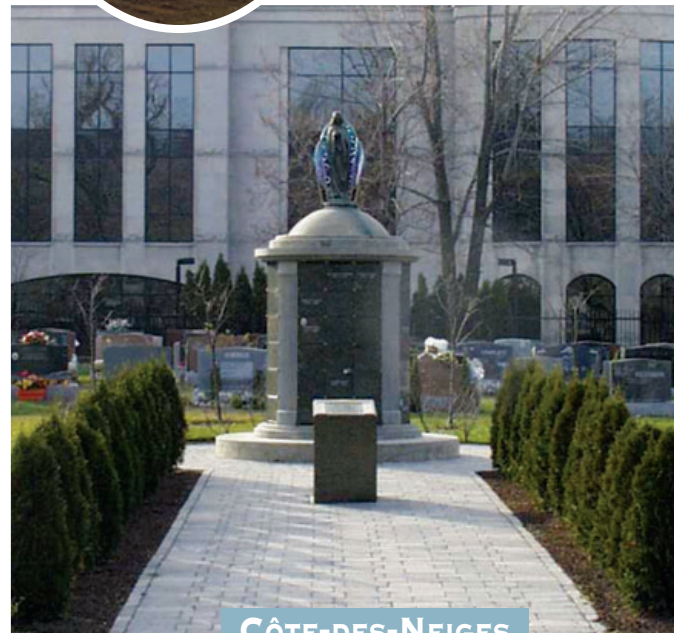

ST-DAVID

This has led to the introduction of twelve (12) different models.

The dome units and other feature units are conceived to provide a first "starter" columbarium that could easily lead to a multi-unit garden development.

CÔTE-DES-NEIGES

LAKEVIEW

In response to the overwhelming customer demand for our product, our creative team has developed over one hundred (100) different designs of exterior columbariums in every imaginable setting, including garden concepts.

CLASSICAL SERIES

TWIN PEAK

Our newest Twin Peak unit has generated a tremendous level of interest. We have now added fifteen (15) new designs of our classical series columbariums.

Our Regional Director, Jeff Johnson, is known as an authority in columbarium development throughout Canada and the United States. He has worked directly with his clients gathering their needs and desires which added to CMC's knowledge and experience resulted in unique and high quality projects.

NEW DESIGNS

SERENITY COLLECTION

DESIGNATED LOCATION

In keeping with the needs of an ever-growing clientele, we have developed a new concept of interior columbarium that is constructed with unique high-density laminated material.

This material can be finished with a wide variety of colors and patterns and has a non-combustible core. Combined with our anodized extruded aluminum frame and bronze fastening system, the result is an economical and innovative lightweight solution.

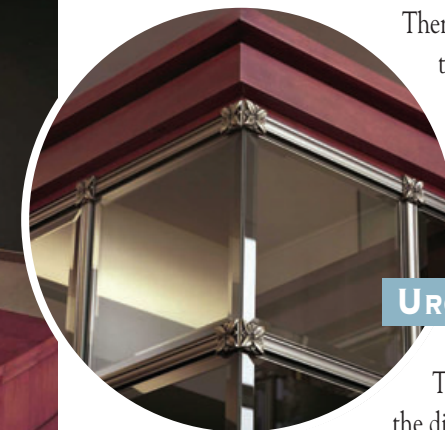

INSTALLATION PROCESS

ROSELAWN

FINAL RESULT

There are a variety of front panels that may be used including glass, marble or bronze. Our team of experts can provide you with a custom layout that can be constructed in phases.

URGEL BOURGIE

This modular system will minimize the disruption of your operation as it can be installed in a minimal amount of time. It is perfectly suited for existing chapels, visitation rooms or any other location suitable for commemoration.

PROJECTS

The Promontory Green Interment Garden, located in Kelowna, B.C., has recently been completed and was inaugurated on May 12th, 2002. This garden has been designed by Hilton Landmarks Inc. and the execution started late November 2001 and was completed within 3 months.

The project includes 900 niches and 60 crypts to meet the area's high rate of cremation as well as optimizing the land use of the cemetery. A waterfall combined with pristine landscaping and the classical copper dome add majesty and tradition to the Kelowna Memorial Park Cemetery.

KELOWNA

This project was a combination of veined granite – Kelowna Silver Mist – as well as precast and poured-in-place concrete.

We truly appreciated the cooperation and relationship that has been developed with the City of Kelowna through this successful accomplishment.

We are both pleased and proud to present our very first CMC – Bronze Division Catalogue which can be seen on our Website since June 2002.

All our bronze accessories were designed to suit the needs of our mausoleum and columbarium clientele.

Please contact us for further information and comments.
